

Student Score = 20

5. Describe the relationship between the abundance of seeds (Figure 4) and the population size of finches (Figure 3).

The population of finches is affected by the abundance of seeds. As shown in Figure 4, the abundance of seeds declined during the drought. With that, figure 3 (Finche Population) also showed a decline. From this, we gather that with less seeds, there are less Finches

Student Response

The population of Finches is affected by the abundance of seeds. As shown in Figure 4, the abundance of seeds declined during the drought. With that, Figure 3 (Finch Population) also showed a decline. From this, we gather that with less seeds there are less Finches.
