

Student Score = 10

11. Below is a geologic timeline. How do geologists know about Earth's past if humans were not present on the Earth at that time? Give an example.

Well geologist can find fossils  
and bones from a long time ago and  
those artifacts could tell you  
what happened like 66 million  
years ago

Student Response

Well geologist can find fossils and bones from a long time ago and those artifacts could tell you what happened like 66 million years ago.
