

Student Score = 20

9. The three pictures above show the same land area over a period of time. Describe how weathering, erosion, and deposition changed the land surface over time.

Weathering, erosion and deposition changed the land surface over time because weathering weighed the land surface down. Erosion washed away parts of the land surface over time. Deposition kept it where it is now.

Student Response

Weathering, erosion and deposition changed the land surface over time because weathering weighed the land surface down. Erosion washed away parts of the land surface over time. Deposition kept it where it is now.
