

Student Score = 70

11. Below is a geologic timeline. How do geologists know about Earth's past if humans were not present on the Earth at that time? Give an example.

Geologists know about Earth's past even though humans were not present at the time because they study the rocks and look at what happens today to find out if the same thing happened then.

Student Response

Geologists know about Earth's past even though humans were not present at the time because they study the rocks and look at what happens today to find out if the same thing happened then.
