Public Comment: we need schools like Stem. The old ways of teaching are ineffective.

Public Comment: RE: Delaware STEM Academy

As a parent of a student who has committed to the 1st year at this academy. I would like to comment on this school. My son who loves math and technical ideas and is really looking forward to attending this school. The concept of the school to incorporate science, technology, engineering in math in all aspects of his education will be extremely beneficial. This nontraditional way of education will allow him to excel. He struggles with language type studies and is looking forward to the hands on opportunities that this academy will provide. The idea that they will prepare him for both a college environment as well as a possibility of direct work opportunities upon graduation provide a better option than the traditional school setting. As not every student is a 4-year college material and there are some great options within the engineering field to fill a need. He looks forward to being able to mentor and apprentice with industry leaders. Delaware has a lot of opportunities in these fields and we need to prepare the new workforce to answer these employers needs for new employees that have an interest. I ask that you grant the school its charter to allow it to open this September.

Sincerely,

Loraine Lester
Parent of Brennan Lester - Enrolled Student
