**Public Comment:** I have had the opportunity to review the application to change the allocation of space to better meet the educational needs of our students. I strongly support this application, which has been thoughtfully and comprehensively written in response to the feedback of students, parents and faculty. The recommendations are the best blend of both the resources available and the identified needs. Please consider approval of this application that will significantly improve the educational environment provided our students. Respectfully submitted: Mary Diamond, DO, Member of the Board of Directors, Design Lab Charter School

**Public Comment:** As the Dean of Students for Design-Lab High School, I am proud and honored to be an administrator, for a school with so much potential and promise for success in the near future. The small class sizes help promote success and the attention each individual student needs in order to achieve greatness. By allowing the class sizes to be reduced to 150 students will continue to guarantee success for our students. It will also allow our students to thrive in academic success while our teachers and staff give the students the tools while learning in a college ready environment!

**Public Comment:** I was a conference attendee at Delaware Design-Lab High School. I have only positive support for a major modification. They are a major contributor to secondary education. And need all of the support possible so that they can continue their great contributions to education.

**Public Comment:** The staff and administrators at Delaware Design Lab High School have been very responsive to the needs of students and parents. During teacher-parent conferences, they exhibited concern and understanding for the educational priorities our family has expressed and they have provided an individual program of support for my grand-daughter.
