

It is the duty of all teachers to attempt to impart as much knowledge on their subject as possible into the minds of incoming students. Most educators at least partially succeed in doing this; however, only a few actually try to get to know their students' well enough to care about what goes on in their lives outside the classroom.

Mr. Killheffer is one of the only teachers who is genuinely interested or concerned about which students are going through what situation; who's experiencing health problems, who's trying to achieve what, or who's having trouble in areas outside his class. He truly gets to know each and every one of his pupils and has, from the beginning, been easily approachable and not always as serious as he might seem at first. At the same time, he makes sure that all of his students, despite whatever level they might have come from, have the ability and opportunity to succeed in his subject; Pre-Calculus.

Mr. Killheffer not only puts extra effort in making sure that his students are able to learn the material in class but uses his time after hours to make sure all of the material from his lectures are easily accessible online . Even when he's busy, he never fails to take the time outside of class to assist students or even to check himself make sure that the material is understood. Unlike other courses, his class truly teaches us to think for ourselves and prepare us to solve more than math problems in life.

Whether or not a future aspiration directly relates to his subject, Mr. Killheffer always encourages and even pushes some students to go far beyond what they might have considered possible for themselves.

He goes above and beyond to be a supporting factor in the lives of his students, whatever they may choose to do, and always has a smile and kind word for each of his numerous pupils; regardless of what their grade may be.
